

Juan Miguel Jaramillo Gaviria

AI Development Lead | Full-Stack Architect | Generative AI Specialist

Dear Hiring Team,

I am writing to express my strong interest in contributing to your AI-driven digital initiatives. With over 17 years of experience at the intersection of technology, entrepreneurship, and artificial intelligence, I bring a rare combination of executive vision and hands-on engineering capability — the kind of profile that can take an AI concept from whiteboard to production at every layer of the stack.

A Career Built Around AI-Native Thinking

My journey into technology began in 2007 and has been defined by a forward-looking obsession with emerging digital tools.

Long before Generative AI became a mainstream priority, I was co-founding and leading technology ventures — **LaQuintaP** (2009), **FreshWorks Digital Agency** (2014, operating across Colombia, Mexico, and Spain with clients including Grupo Herdez and El Corte Inglés), and **TRADEBOG/ZIONE Shop** (2020), recognized as Colombia's leading dropshipping platform. This entrepreneurial foundation means I don't just build AI features — I understand the business problems they must solve.

Deep, Production-Proven AI Expertise

Since 2022, I have specialized exclusively in Generative AI, with a focused practice in LLM fine-tuning (PEFT, RLHF), prompt engineering, and enterprise AI architecture. As **AI Development Lead at TopNetworks Inc.**, I designed and shipped an entire internal SaaS ecosystem — **EmailGenius** (AI email generation via Vertex AI + PostgreSQL), **TrafficGenius** (invalid traffic detection with BigQuery + Cloud Armor), **RouteGenius** (probabilistic traffic distribution on Supabase), and **Social Media Genius** (AI-powered social content generation with a

canvas editor) — all on a modern stack including Next.js 15–16, TypeScript, React 19, Astro 5, and Gemini 3.5 Flash on Google Cloud. These are not proofs of concept; they are live, revenue-supporting platforms.

Advisory Reach and Measurable Impact

My consulting practice has delivered AI strategy and implementation to organizations including the **Telefónica Movistar Foundation**, **Universidad Francisco Marroquín (Guatemala)**, and **Wundermann Thompson Miami**. The outcomes I drive are quantifiable: AI-powered tool adoption has delivered up to a **46% increase in productivity** and a **66% reduction in monthly costs** for clients — figures that translate directly into competitive advantage for any organization investing in AI.

Advanced Tooling and Agentic Systems

Beyond prompt engineering, my technical depth extends to **LangChain**, **LangGraph**, **CrewAI**, and **Vertex AI Agent-to-Agent (A2A) frameworks** — all at an advanced level. I hold certified training from the **University of Toronto** (Generative AI for Business), the **University of Michigan**, and **Platzi**, with coursework spanning AI ethics, governance, organizational transformation, and applied prompt engineering. I write production-grade code in JavaScript/TypeScript, Python, and SQL, and I am deeply fluent in cloud-native infrastructure on Google Cloud Platform.

Why This Matters for Your Team

What sets me apart is not just technical breadth — it is the ability to operate as a **one-person AI center of excellence**: architecting systems, writing the code, engineering the prompts, managing hallucination risk, and communicating strategy to non-technical stakeholders. I hold a firm belief, stated publicly in my professional presentations, that "Artificial Intelligence is not a replacement — it is a tool". This philosophy drives pragmatic, responsible AI deployment that amplifies human capability rather than replacing it.

I am excited by the opportunity to bring this full-stack AI leadership to your organization and would welcome the chance to discuss how my experience aligns with your goals.

Warm regards,

Juan Miguel Jaramillo Gaviria
