Re: Application for AI Engineering Leadership / Full-Stack Architect Role

Dear Hiring Team,

I am writing to express my strong interest in joining your team as an AI Engineering leader. Bringing over 17 years of technical execution and entrepreneurial leadership, I specialize in navigating the space between abstract generative AI concepts and scalable, production-grade architectures. I offer your organization a rare combination of strategic vision and full-stack engineering depth.

| A Career Built Around AI-Native Thinking

My career has been defined by an early adoption of emerging technology paradigms. Well before generative AI reshaped the global tech landscape, I founded and scaled multiple successful digital and technology ventures—including LaQuintaP, FreshWorks Digital Agency across Europe and LATAM, and TRADEBOG, an industry-leading dropshipping platform in Colombia. This deep entrepreneurial foundation ensures that every AI system I architect is engineered to solve a concrete business problem and drive measurable bottom-line value.

| Deep, Production-Proven AI Expertise

Since 2022, I have focused exclusively on enterprise-grade generative AI development, LLM fine-tuning (PEFT, RLHF), advanced prompt engineering, and agentic product design. As the AI Development Lead for TopNetworks Inc., I personally designed, built, and shipped a highly profitable internal SaaS ecosystem: **EmailGenius** (high-throughput AI email generation utilizing Vertex AI and PostgreSQL), **TrafficGenius** (real-time invalid traffic detection using Google BigQuery and Cloud Armor), **RouteGenius** (probabilistic web traffic distribution running on Supabase infrastructure), and **Social Media Genius** (an AI-native social content generator complete with an interactive canvas editor). These systems are not experimental prototypes; they are highly scalable, revenue-generating platforms built on Next.js 15/16, React 19, Astro 5, TypeScript, and the Gemini 2.5 Flash model deployed on Google Cloud Platform.

| Advisory Reach and Measurable Impact

Beyond internal product execution, my technical advisory work for organizations like the Telefónica Movistar Foundation, Universidad Francisco Marroquín, and Wundermann Thompson Miami has delivered definitive operational impacts. My AI implementations have consistently driven up to a 46% increase in team productivity while securing up to a 66% reduction in monthly infrastructure and operational costs.

| Advanced Tooling and Agentic Systems

I possess advanced, production-proven mastery of LangChain, LangGraph, CrewAI, and Vertex AI Agent-to-Agent (A2A) frameworks. Backed by academic credentials in generative AI strategy and ethics from the University of Toronto and applied prompt engineering from Platzi, I write clean, production-grade code across Python, JavaScript/TypeScript, and SQL.

I view artificial intelligence not as a human replacement, but as an exponential leverage tool. I am eager to bring this exact philosophy, along with my full-stack execution capabilities, to your organization. Thank you for your time and consideration; I welcome the opportunity for a technical interview.

Warm regards,

Juan Miguel Jaramillo Gaviria
